# NERSC inventory

- HYCOM ocean model
- EnKF assimilation experiment
- Atlantic-Arctic model
- Indian Ocean/Southern Ocean model
- Nested models

# The TOPAZ model system

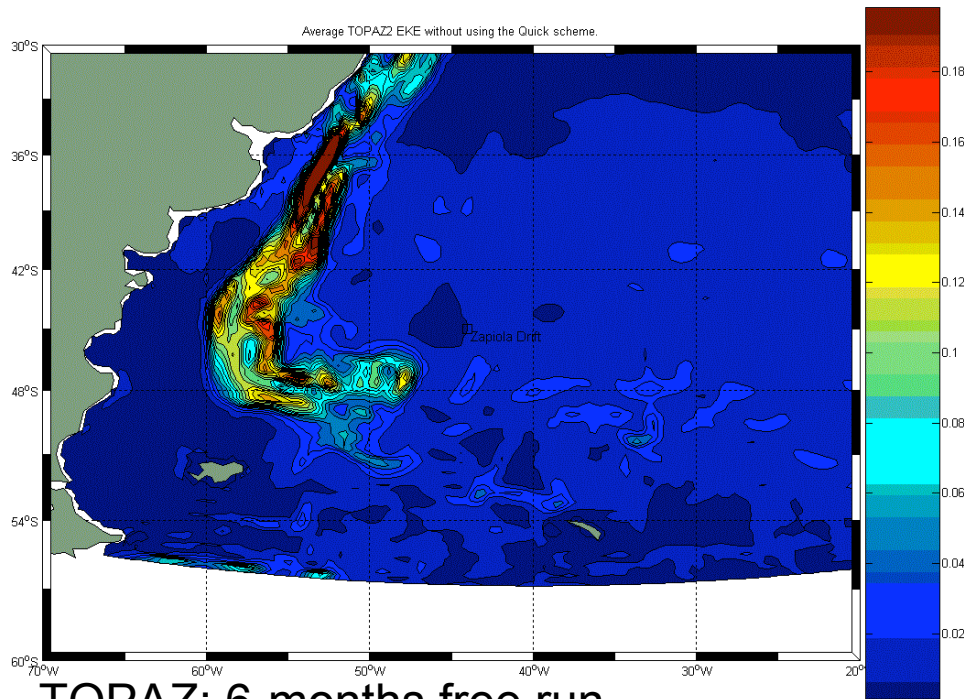

- 3D ocean model
  - HYCOM (U. Miami, USA)
  - Coupled sea-ice model
  - Biogeochemical models
- Observations
  - Altimetry, SST (CLS, F)
  - Sea Ice (NSIDC, USA)
  - In-situ (CORIOLIS, F)
- ECMWF forcings
- Data assimilation
  - Ensemble Kalman Filter

# Illustration Zapiola Eddy

- Topographically-steered C-shaped Eddy Kinetic Energy

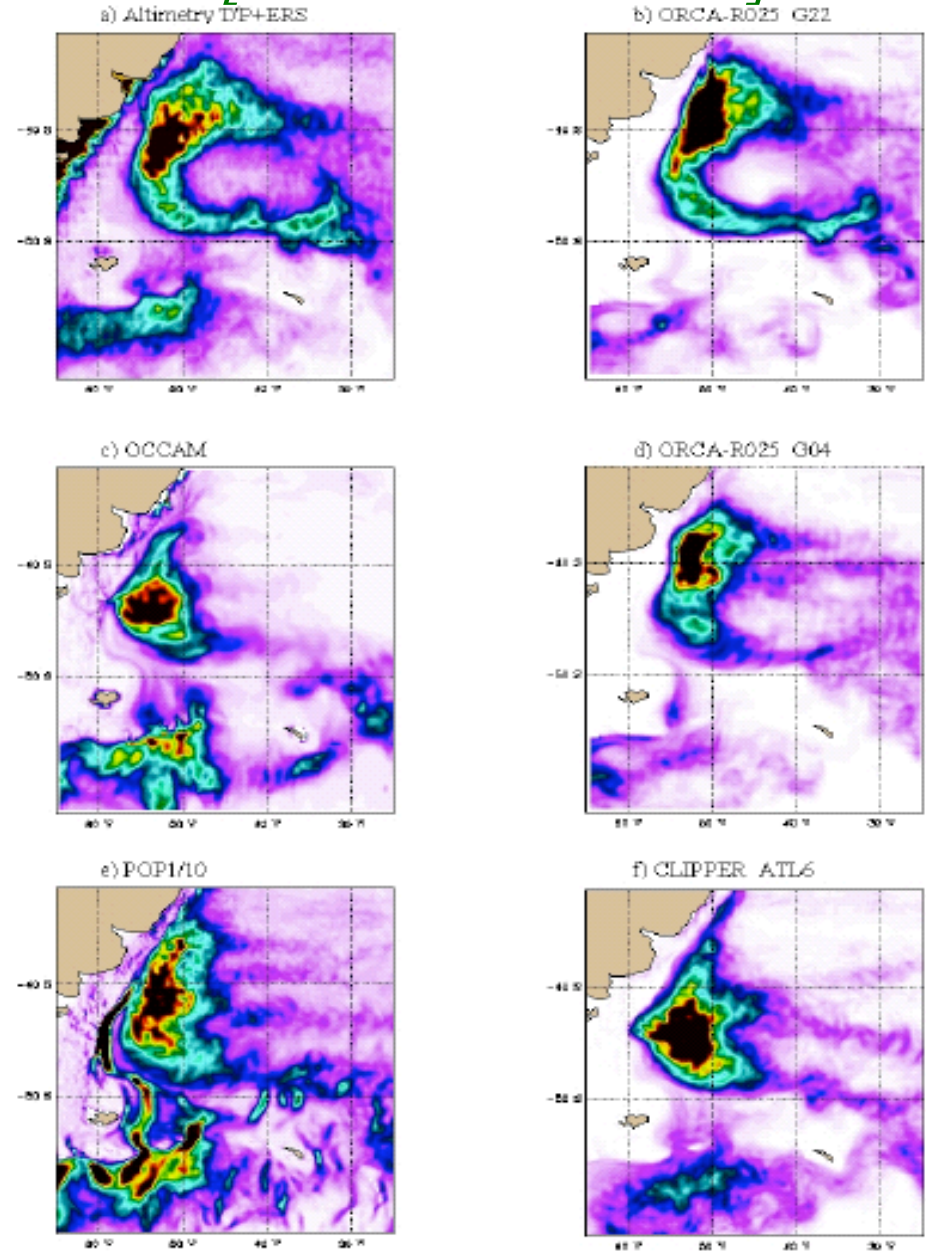

[ Barnier et al. 2006 ]

TOPAZ: 6-months free run

(no assimilation)

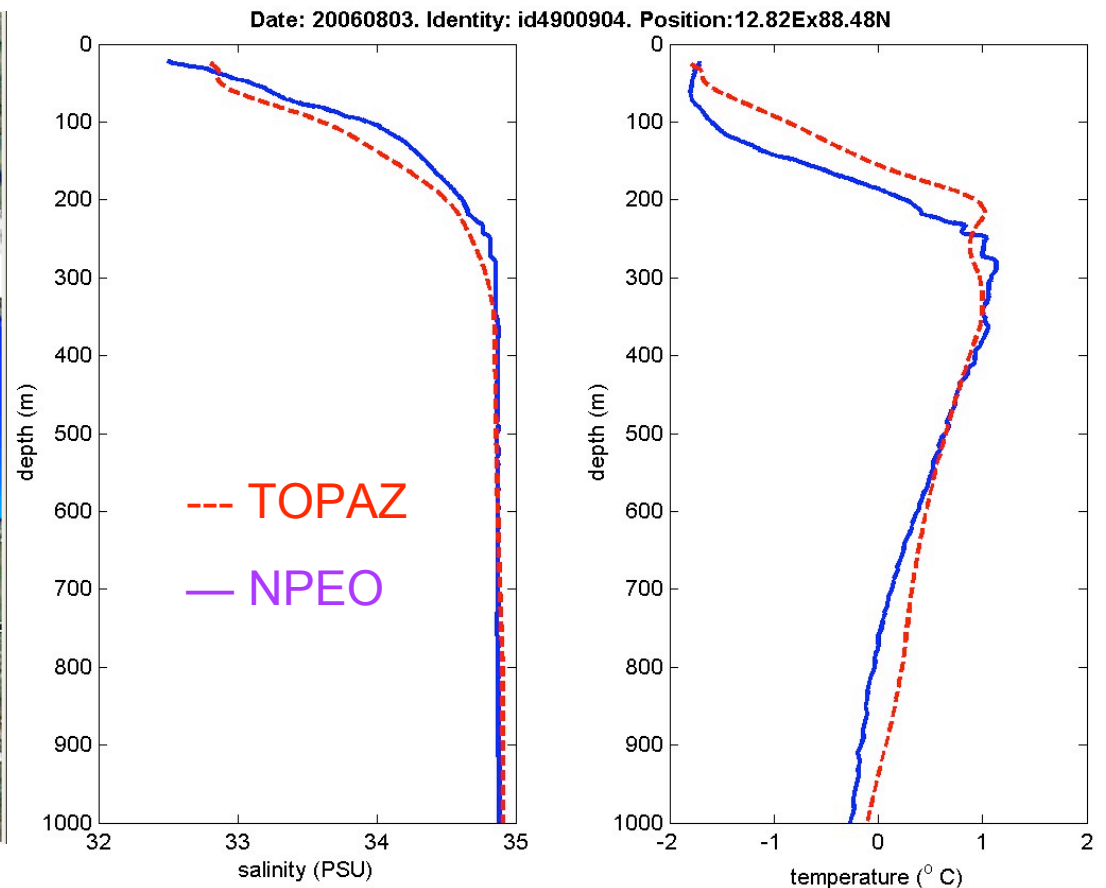

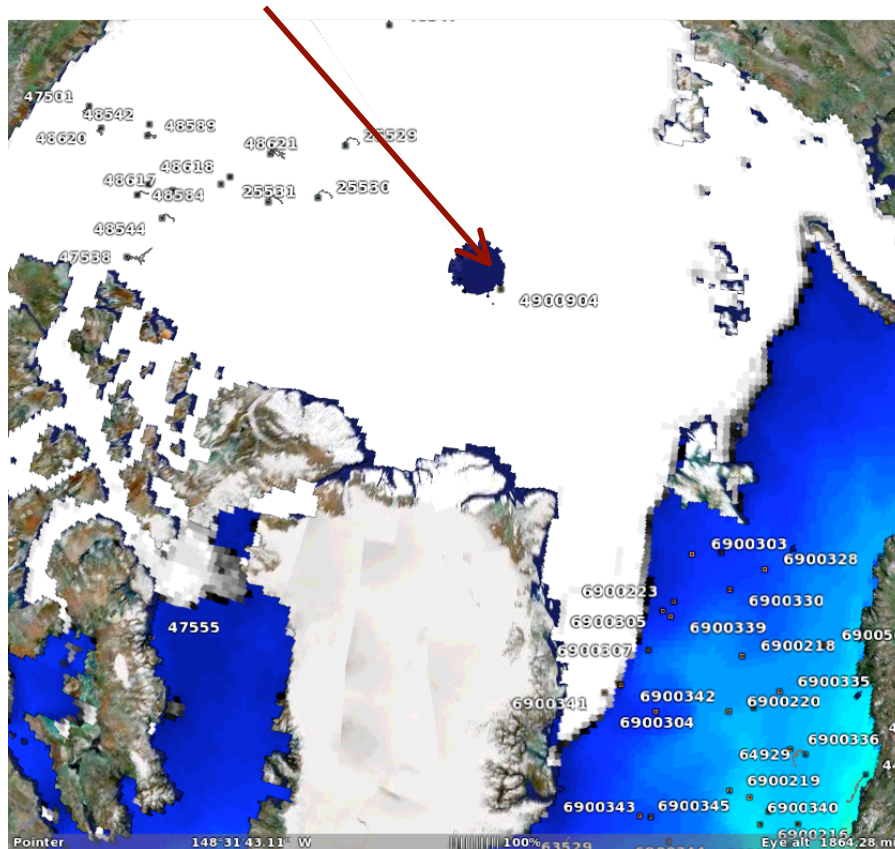

[ G. Nondal ]

# Validation in the Arctic

[ *F. Høydalsvik* ]

- NPEO 2006 profiles (also in Coriolis data)

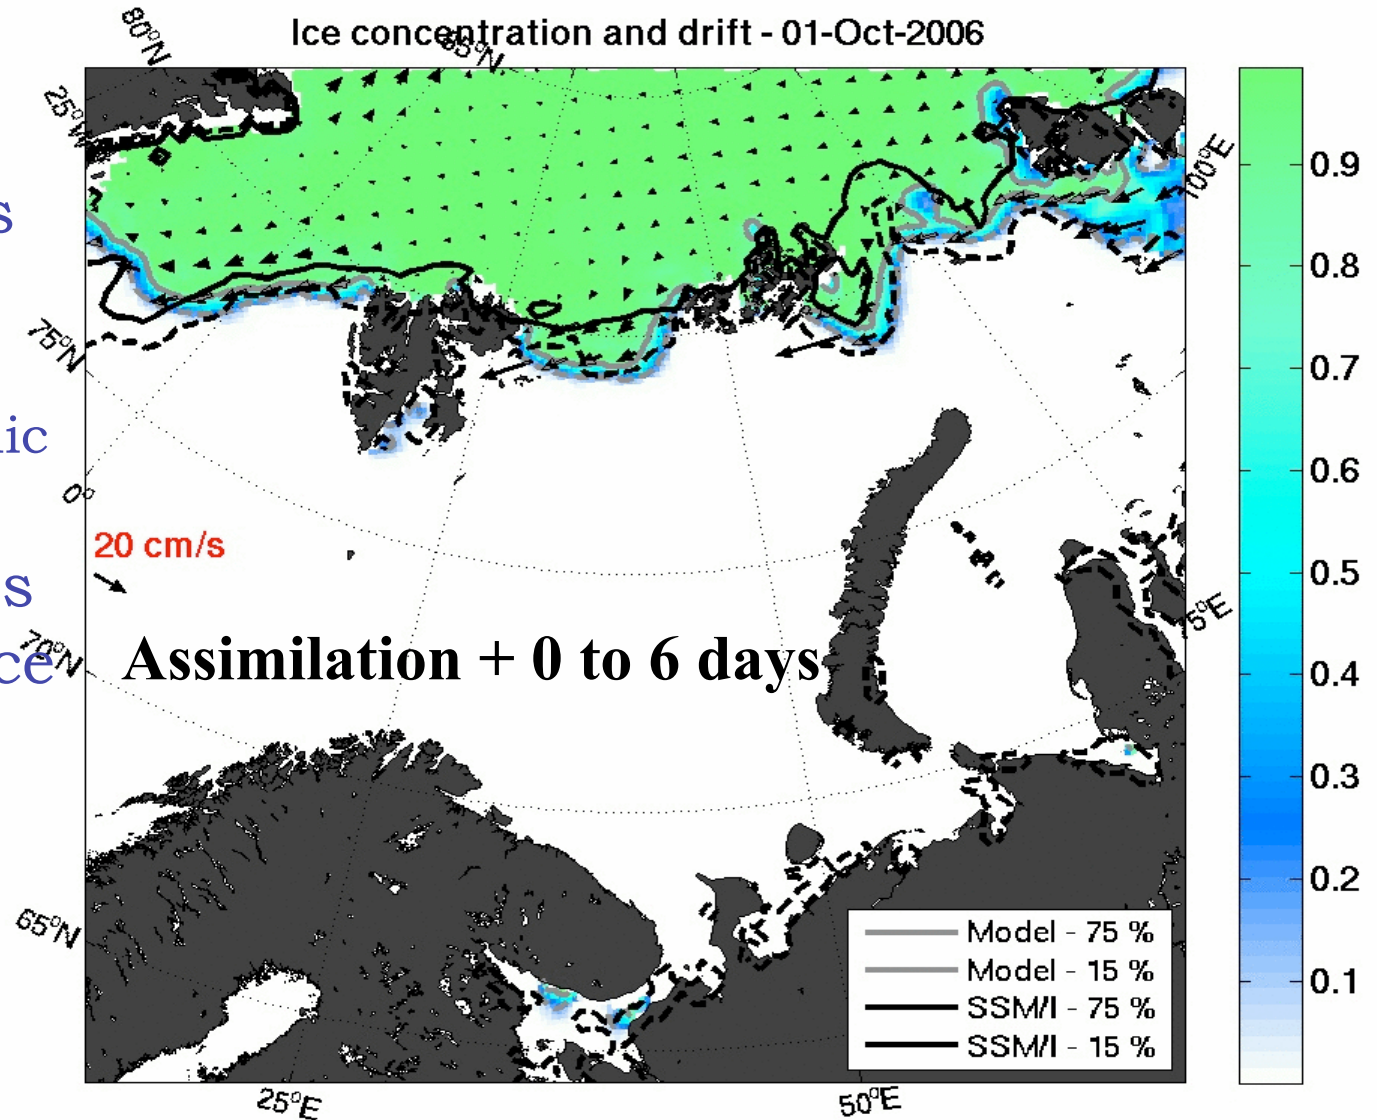

\*: North Pole Environment Observatory

# Ice coverage

[ *K.A. Lisæter* ]

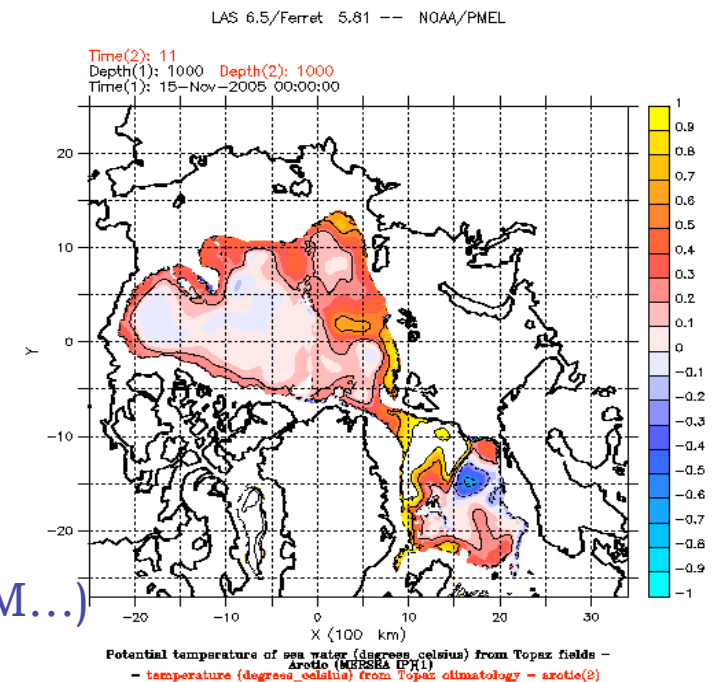

- Ice cover depends
  - On surface water properties
  - On thermodynamic fluxes
- Ice concentrations is assimilated once a week in TOPAZ
- No assimilation “shocks”
- Forecast skills?

# The Arctic TEP

<http://arctic.mersea.eu.org>

- Arctic Thematic Portal (TEP) in MERSEA IP is operational since October 2005
  - Visualization of forecast and analyses
    - Live Access Server
  - Download
    - THREDDS (data server)
    - OpENDAP (protocol)
  - Comparisons against
    - Climatology
    - ... Other models (FOAM, Mercator, HYCOM...)

*[ K.A. Lisæter, B. Solli ]*

# System Applications

- Nested systems in
  - 📁 North Sea (N. Winther/C. Hansen)
  - 📄 Gulf of Mexico (F. Counillon)
  - 📄 Barents Sea (I. Kechouche)
  - 📄 Agulhas Current (B. Backeberg)
- Ecosystem models

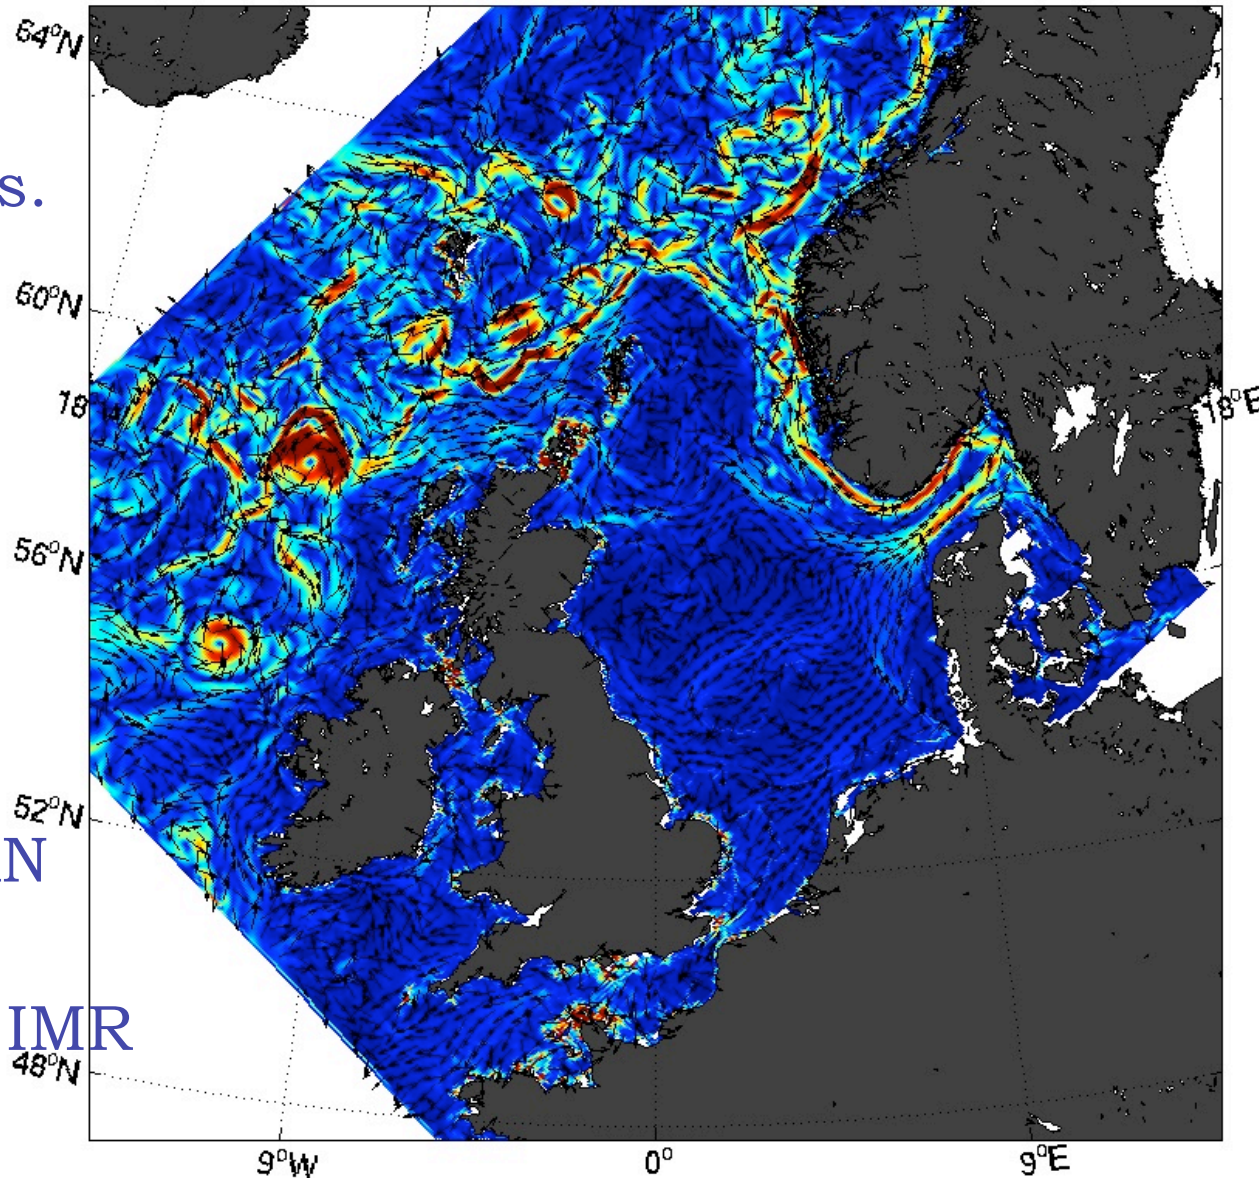

# North Sea / Norwegian Sea

HYCOM  
4 km res.

CONMAN  
Collab.  
Met.no/IMR

[ *C. Hansen* ]

# Gulf of Mexico ensemble forecasting

[ *F. Counillon* ]

Overlay of model 7d forecast fronts (“spaghetti plot”) and posterior Ocean Color observed from MODIS

HYCOM settings:

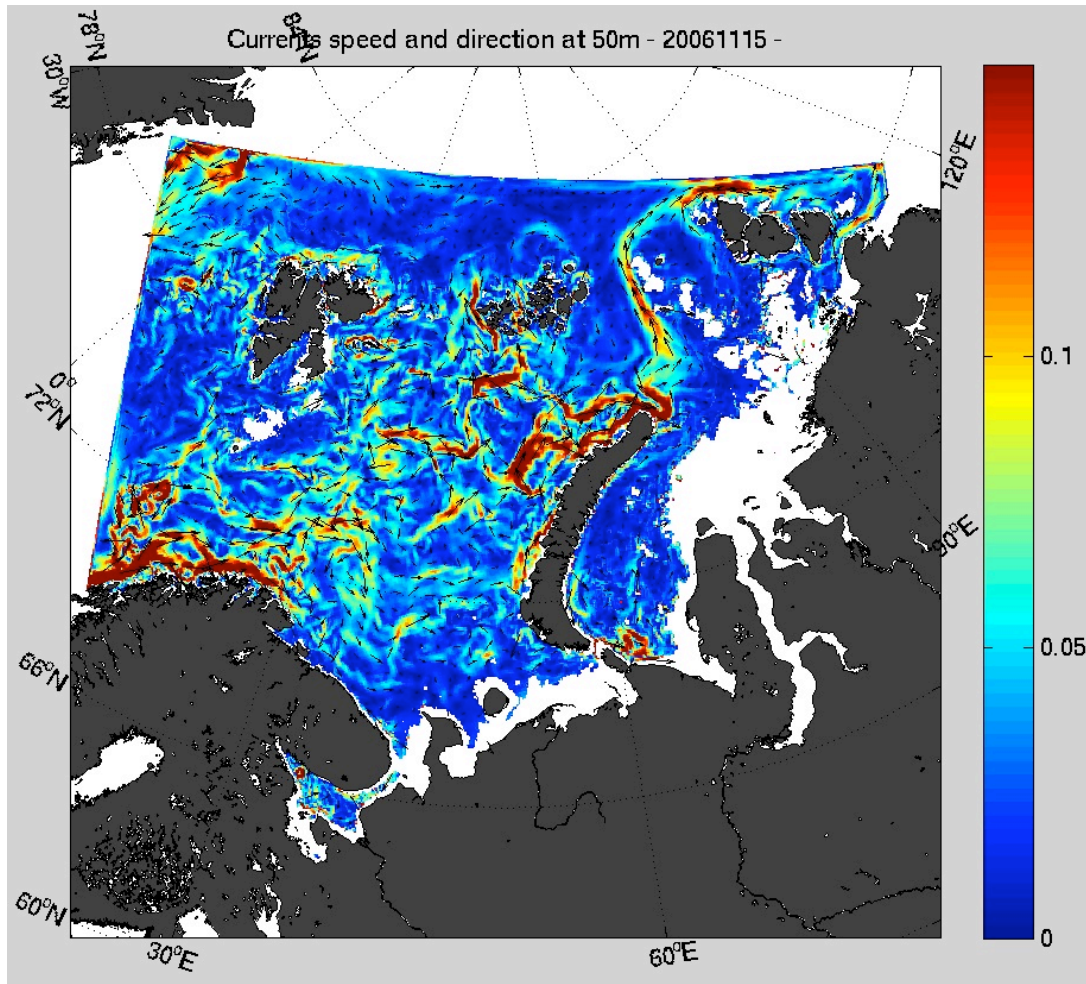

- 5 km horizontal resolution (1/20<sup>th</sup>)
- Assimilation of SSH
- Randomness from
  - Initial fields (assimilation)
  - Forcing fields

# Barents Sea 5km HYCOM

*In real-time since September 2006 [I. Kechouche]*

Objectives:

Ice-ocean Monitoring,  
Iceberg forecasting

# Ecosystem models

- HYCOM coupled with
  - NPZD models (Fasham)
  - NORWECOM (IMR)
  - Individual Based Model (IBM) *C. Finnarchicus* (IMR)
- Focus on the Norwegian Sea
  - Influence of fronts and eddies on the marine ecosystem
  - Cross-shelf transport of zooplankton

Drift trajectories of *C. Finnarchicus*

[ A. Samuelsen ]

# Effect of model horizontal resolution

[ C. Hansen ]

40 km

15 km

5 km

Scale 0-8 mg N / l

Scale 0-25 mg N / l

Scale 0-25 mg N / l

**HYCOM – NORWECOM Diatoms, April 1997**

# Next upgrades ...

## Model developments

- Higher (x2) resolution 11 km TOPAZ3: April 2007
- Ecosystem models

## Assimilation

- More observations
  - sea-ice drift (CERSAT, Ifremer)
  - sea-ice thickness (ESA, CryoSat2, 2009)
  - In-situ data (Coriolis, Ifremer)
- Parameter estimation (Evensen 2006)
- Improved analysis schemes (Sakov & Oke, 2006)

# TOPAZ v2

*Sea Surface Heights – 6<sup>th</sup> Apr 2006*

Resolution  
18km to 36 km  
27 million state  
variables

# TOPAZ v3

## *Sea Surface Heights – Spinning up*

Resolution  
11km to 16 km  
81 million state  
variables  
More realistic  
Gulf Stream

Improved  
circulation  
Nordic Seas

# Geographical extensions

  Indian & Southern Oceans

  Pacific Ocean

  Agulhas

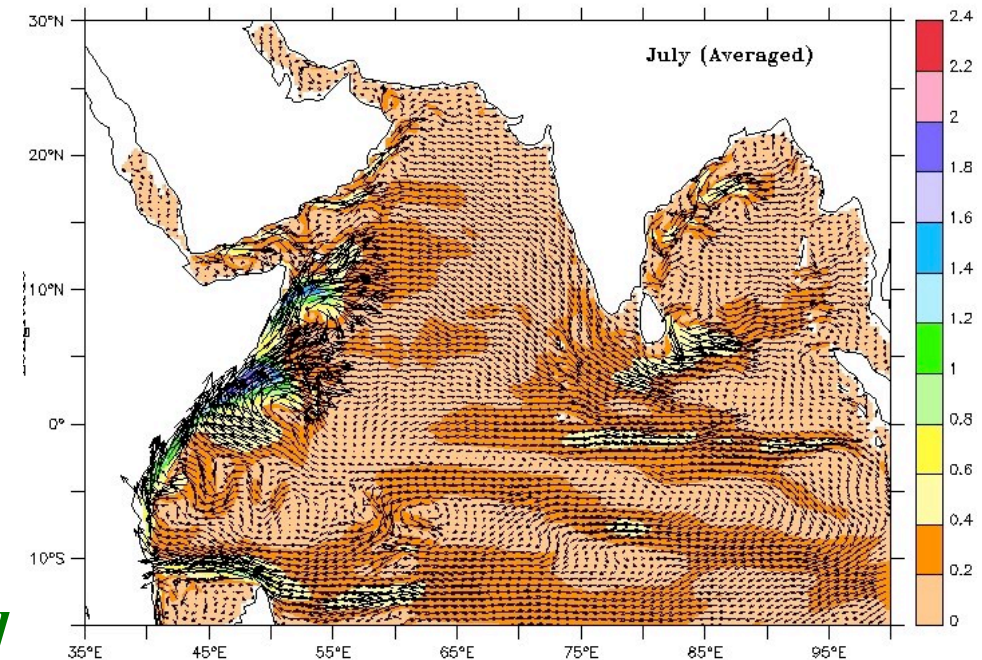

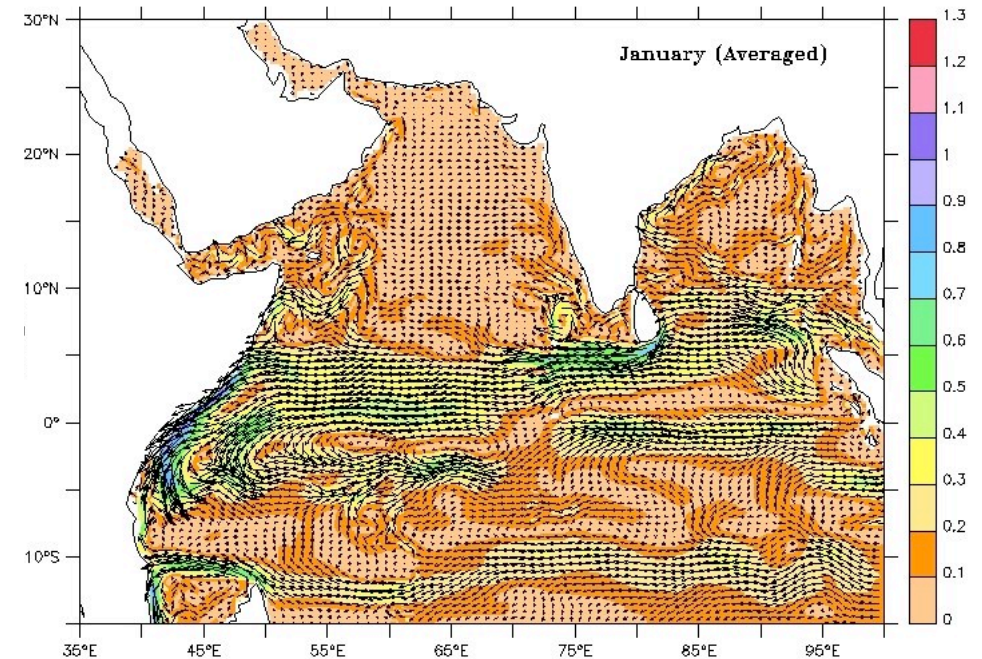

# Indian Ocean

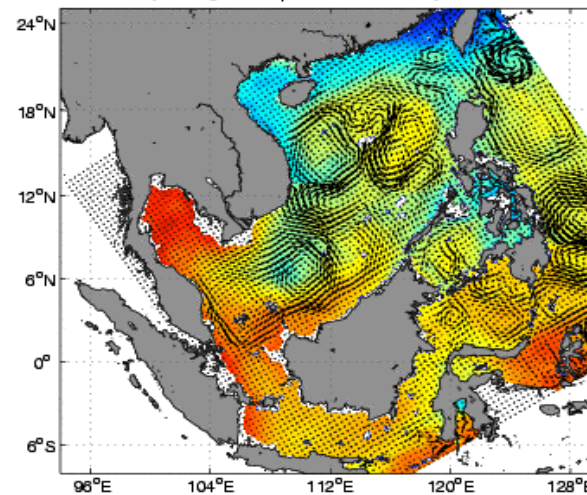

- A clone of TOPAZ is being validated
  - India and Antarctic setup
    - Nesting to Agulhas Region
  - Monsoon circulation is qualitatively correct
    - Top: January
    - Bottom: July
- Next:
  - Data assimilation
    - Sea Level Anomalies
    - Sea Surface Temperatures
    - Argo profiles
  - Operational runs

*[ S. George, R. Mankettikara ]*

# Pacific Ocean

- Pacific 0.5deg resolution
  - Transferred to IAP and NMEFC in Beijing for use with EnKF.
  - 3 papers submitted
- Nested model in the South China Sea (1/10<sup>th</sup> degree)
  - Models initially developed for Ocean Numerics Ltd.
  - Run 20-years hindcast
  - Compares well to tidal and mesoscale currents (ADCP).

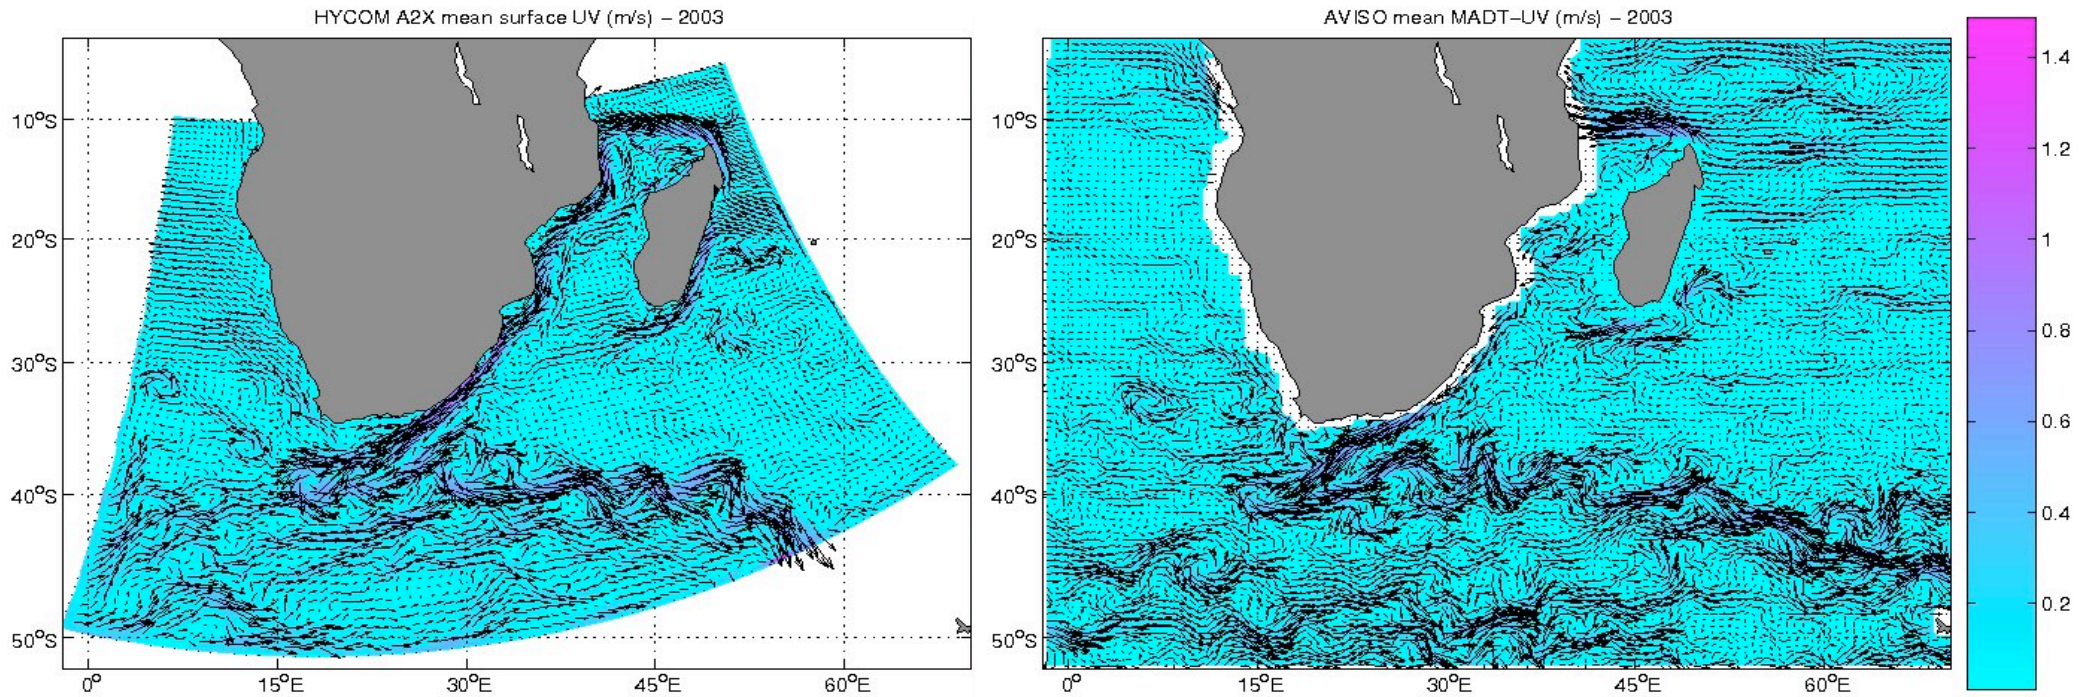

*[ N. Winther,  
C. Hansen,  
I. Kechouche ]*

# Model validation – circulation

Layered Ocean Model Workshop August 20 – 22, 2007

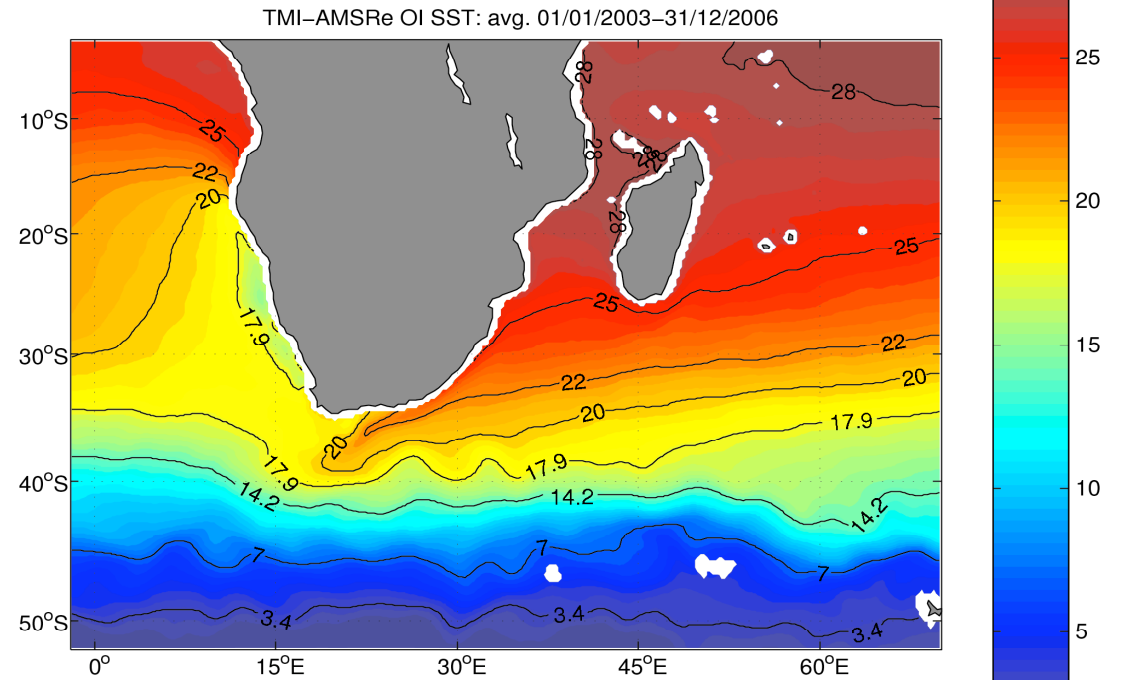

## Model validation – SST

HYCOM A2X SST

- Reduced southwestward penetration of SST worse than anticipated!!

TMI-AMSRe OI SST

- Microwave SST unaffected by clouds
- Global high resolution (~25 km) coverage only available from June 2002
- Much better representation of mesoscale features

Layered Ocean Model Workshop August 20 – 22, 2007

# Model validation – mesoscale variability

EKE integrated to bottom

EKE derived from SLA observations from altimetry

# Conclusions, objectives

- The combination EnKF+HYCOM has some skills
  - The EnKF is a generic assimilation method
  - TOPAZ shows skills in many regions of the world oceans
  - Upgrade to TOPAZ3 in April 2007
  - Systematic validation in collaboration with MERSEA
  - Collaboration with NOPP-HYCOM
- Ecosystem
  - On research mode
  - Large scale system operational in 2008.
- Ice modeling
  - Next: Improved modeling of the Marginal Ice Zone
- Sub-modules in development mode
  - Iceberg
  - Floats / Larvæ drift

# Participation in EU FP7

- The Marine Core Service (MCS) under GMES will be implemented for full operation in 2008 - MyOcean.
- MCS will consist of a 7 components; one global and five regional monitoring and forecasting centers
  - Mediterranean (in lead INGV)
  - Black Sea (MRI, Ukraine)
  - Iberian, Bay of Biscay
  - Northeast European Shelves (in lead UK Met)
  - Baltic (in lead DMI)
  - Arctic (in lead NERSC)
  - Global (in lead MERCATOR)
- TOPAZ will be assimilation and forecasting system for the Arctic MCS.
- The MERSEA IP and its extension to MCS are the European contribution to GODAE

**DRAGON in support of harmonizing European and Chinese  
marine monitoring for Environment and Security System**

**DRAGONESS**

**BILATERAL EU-P.R. OF CHINA PROJECT 2007-2010**

**NERSC contribution to WP 6**

# Workshop, Summer School, Symposium

- We will need to combine these DRAGONESS events with other complementary activities
- Final DRAGON meeting in Beijing in March/April 2008
- Themes to be considered and prioritized for Workshop/Summer school
- Ocean remote sensing training course in 2010 (DRAGON 2)
- PORSEC take place in December 2008, Gangzhou
- Symposium to be held in China in 2nd-3rd quarter of 2010

# Action Items

- Update Gantt diagram (Johnny) including start of WP 5 at T0 (Update WP 5 plan)
- NZU effort in WP 3 moved to WP 4
- Institute Logo (miss MOST, SIO/SOA, BNU, NMEFC, NSOAS, GKSS, ORS Cons.)
- Updated standard template for deliverables to be circulated (Johnny)
- Avoid redundancy between WPs - Leader/Co-leader responsibility)
- Make Chinese/European capacity more visible (EuroGOOS, NearGOOS), etc. (all)
- Use flowchart for WP 1 for all tasks (WP leader/Co-leader)
- How can we optimize the match between DRAGON and DRAGONESS (all)
- Themes for workshop and summer schools (all)
- Invite WP 4/WP 5 representatives to MERSEA final meeting in April 2008
- Check where and (if) when the final GODAE meeting take place.
- Special session of PORSEC (Werner Alpers to check)
- Summary paper of the kick-off meeting for EOS (action Werner and Chuanmin, Hu)
